SUMMARY

DevOps Engineer with practical internship experience at RoboWaves Pvt. Ltd in Linux Administration, Docker containerization, Kubernetes, Terraform, AWS, CI/CD pipelines, and infrastructure monitoring using Prometheus and Grafana. Passionate about automating workflows, building scalable infrastructure, and continuously learning modern DevOps practices. Seeking a Junior DevOps Engineer role to apply and grow real-world technical skills

EDUCATION

B.E/Computer Science And Engineering, MAM School Of Engineering
• CGPA: 7.5

07/2021 – 04/2025
Trichy, TamilNadu

SKILLS SUMMARY

Linux Administration: Ubuntu Linux, User & Group Management, File Permissions, SSH, Disk & Memory Management, Cron Jobs, Systemd Services, Process Management, System Troubleshooting

Containerization & Orchestration: Docker, Dockerfile, Docker Compose, Container Networking, Volumes, Kubernetes

Infrastructure as Code: Terraform, Ansible

Scripting: Shell Scripting, Python

Monitoring: Prometheus, Grafana

Cloud: EC2, VPC, S3, IAM, Security Groups, Route Tables, EBS, Load Balancer, Auto Scaling

Application Deployment: Spring Boot, Apache Tomcat, Nginx, Maven, REST APIs, Mysql, Redis

Version Control & CI/CD: Git, GitHub, Jenkins

Networking: TCP/IP, DNS, DHCP, Nmap, Routing, Subnetting, Switching

WORK EXPERIENCE

DevOps & Cloud Intern, RoboWaves Pvt. Ltd

- Managed Linux users, permissions, packages, and system services.
- Deployed and maintained Spring Boot applications on Linux environments.
- Built and managed Docker containers for application deployment.
- Automated routine tasks using Shell scripting.
- Monitored infrastructure using Prometheus and Grafana.
- Used Git, GitHub, and Jenkins for version control and CI/CD.
- Troubleshoot Linux, networking, and application-related issues.

PROJECTS

Spring Boot Application Deployment using Docker, Technologies: Linux, Docker, Spring Boot, Maven

- Developed and deployed a Spring Boot application on Linux with full containerization using Docker.
- Created optimized Dockerfiles, built images, and managed containers and volumes.
- Used Docker Compose for multi-container orchestration and implemented container monitoring and troubleshooting workflows.

Linux Server Administration and Automation, Technologies: Ubuntu Linux, Bash

- Managed Linux users, groups, file permissions, SSH access, and system services.
- Automated routine maintenance tasks using Bash scripts and scheduled jobs with Cron.
- Monitored CPU, memory, and disk utilization; performed system troubleshooting and log analysis

AWS Infrastructure Provisioning with Terraform, Technologies: AWS (EC2, VPC, S3, IAM), Terraform

- Designed and provisioned a complete AWS environment including VPC, subnets, EC2 instances, and security groups using Terraform.
- Managed IAM roles and policies for least-privilege access control.
- Enabled version-controlled infrastructure changes through Terraform state management.

CERTIFICATES

JSpiders – DevOps and Cloud Training — Linux Administration • AWS Cloud Fundamentals • Docker Fundamentals • Kubernetes Fundamentals • Jenkins CI/CD • Terraform Basics
