EDUCATION

B.E/Computer Science And Engineering, MAM School Of Engineering

• CGPA: 7.1

07/2021 – 04/2025

Trichy, TamilNadu

SKILLS SUMMARY

Languages

java, sql, html, shell scripting

Methodologies & Web servers

SDLC & Agile

Apache Tomcat and Nginx

Cloud (AWS)

EC2, S3, IAM, EBS, ASG, ELB/ALB, Route 53, CloudWatch, SNS, VPC, Lambda

Framework & Databases & OS

Spring, Spring Boot, Mysql

Windows & Linux (Ubuntu & RHEL)

DevOps Tools

Git & GitHub, Maven, Docker, Dockerhub, Jenkins, Ansible, Terraform & Kubernetes

Grafana, Prometheus, Nexus, Cadvisor, Node Exporter

AI & Automation

Used AI tools (ChatGPT, Copilot, etc.) for DevOps automation, scripting, debugging and CI/CD optimization.

Work Experience

Java Fullstack Intern, RoboWaves Pvt. Ltd

Completed a Full Stack Development internship with hands-on training. Developed web applications using Java, JSP, Servlets, JDBC. Designed responsive user interfaces using HTML, CSS, and JavaScript. Implemented backend logic and database connectivity using SQL. Followed MVC architecture and basic SDLC practices.

Debugged and tested applications to improve performance and reliability.

PROJECTS

Static Web Hosting on AWS EC2 with Nginx

Configured and deployed a static website on Amazon EC2 using Nginx, handling server setup, port configuration, and file hosting. Gained practical experience in Linux server administration, including service management, deployment workflows, and basic system configuration in a cloud environment.

Spring Boot Application with Secure AWS VPC Architecture

Built a full-stack application using Spring Boot and Thymeleaf, and designed a secure cloud architecture by configuring a custom VPC within Amazon Web Services. Deployed the application and database on separate Amazon EC2 instances to enhance security, isolation, and scalability, while gaining hands-on experience in network segmentation and cloud infrastructure design.

Employee CRUD Application (CI/CD Pipeline)

Developed and deployed an Employee CRUD application using a complete CI/CD pipeline, integrating Jenkins for automation and continuous delivery. Designed a Jenkins Pipeline (Jenkinsfile) to handle build, test, and deployment stages triggered by Git commits. Containerized the application using a Dockerfile and orchestrated multi-container services (Spring Boot application and MySQL database) with Docker Compose. Ensured consistent environments across development and production, configured service dependencies and environment variables, and automated deployment workflows, significantly reducing manual intervention and improving delivery speed.

Certificates

• Java Full Stack Development with DevOps — RoboWaves Pvt. Ltd
